Case History

A bakery oven was contaminated with burned-on carbon which was negatively impacting product integrity.

The oven had to be cleaned and sanitized within an 8-hour down time. **EAGLE** employed 20,000 psi water to strip the carbonized material from oven surfaces. **EAGLE** then applied a quaternary ammonia sanitizer for the final rinse.

The project was completed in the 8-hour time window, and the product integrity was restored for the owner.
